Kosh-Clear Otic Gel

Kosh-Clear is a bioadhesive, thermoreversible gel that can be customized to deliver multiple active drug ingredients including antibiotics, anti-inflammatories and more.

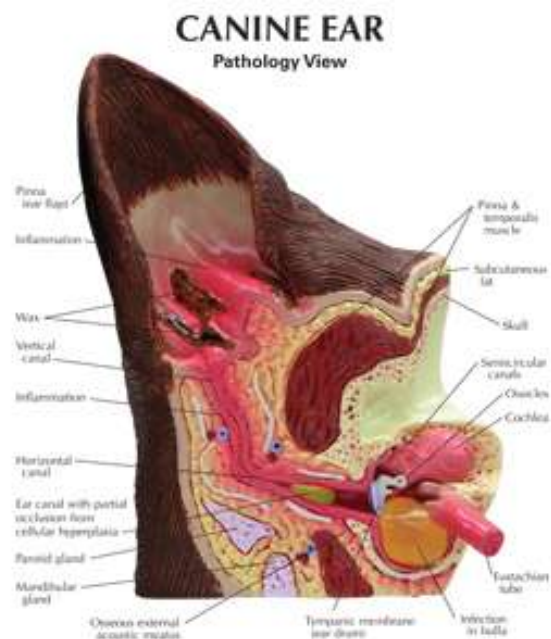

A single 1.5ml dose of cold Kosh-Clear can be used in each ear. The drug will then turn into a bioadhesive gel, completely coating all the tissue in the ear canal. A second dose can be applied in one week if necessary. And unlike lanolin-based preparations, Kosh-clear does not clog the ear canal or need to be flushed out.

Example formula:

□ **Enrofloxacin 2%/Ketoconazole 2%/Triamcinolone 0.25%**

Custom formulations can include:

- Gentamicin
- Ciprofloxacin
- Clotrimazole
- Amoxicillin
- Ceftazadine
- Almost any drug
